Waterjet quote - X back joining plate

One drawing: the **X back joining plate**, 28 holes in a supplied length of 6061 flat bar. The material is **supplied** - the job is the holes. **Every drawing is a separate DXF** and the file name is printed on its page.

What is in it

File	Part	Material	Overall	Holes
`5-x-back-joiner.dxf`	X BACK JOINING PLATE - QTY 1	STOCK 1000 mm (39.370 in) x 120 mm (4.724 in) x 6.42 mm (0.253 in) 6061	1000 × 120 mm	28 × ø9 mm (0.354 in)

How to read the drawings

- **Units are millimetres** and the origin is the lower-left corner of every drawing. Inch equivalents are printed alongside for reference only — work to the millimetre figures.
- **R12 DXF, lines, circles and arcs only.** No polylines, no splines, no blocks. Outlines are closed.
- **Layers:** OUTLINE is the cut profile, HOLES are the holes, NOTES and PARTS are text and are not to be cut.
- **Where a drawing says STOCK, the material is supplied** and the outline drawn IS that piece — the job is the holes, and any excess falls outside them. Where it says MATERIAL, the shop supplies the plate and the outline is the part to cut.
- **Holes called out as edge-bored are not drawn.** They run into a part's end face rather than through it, and are drilled here.
- **Where two parts share one piece**, both are drawn in position on it with the kerf allowed between them.

What would help on the quote

- Price **per drawing**, and separately the material where you are supplying it.
- Say if any hole is **below your minimum for the thickness** — a pilot that gets opened out here is fine, and so is a scribed mark, so tell us which you would rather cut.
- Note any outline you would rather nest differently. Nesting is yours to choose; the drawings do not assume one.

X BACK JOINING PLATE - QTY 1

STOCK 1000 mm (39.370 in) x 120 mm (4.724 in) x 6.42 mm (0.253 in) 6061
